

## We are...

A Colombian company with more than 18 years of experience in the IT industry. We create value for our clients by developing software projects in different types of technology under the staffing mode. By means of management processes, we guarantee the continuity of business and technical knowledge in the task forces.

“We are the knowledge and technology that support business continuity”

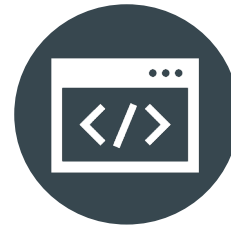

**+ 18 years of  
experience**

**+ 80  
collaborators**

**+ 50 companies  
impacted by our IT  
solutions**

**+ 3,000 projects at the  
national and  
international levels**

**Agile  
methodology**

**Process  
maturity**

## Our services

### Staff Augmentation

We offer staff with the soft, technical, and professional skills required to join the client's work team and with the background and experience necessary to carry out software-based projects.

### Business Solutions

Today, applications are key to simplify processes and user experiences; that is why we have a group of engineers and creatives committed to develop, under agile frameworks, the ideal solution for your business on web or mobile devices.

### Agile Team

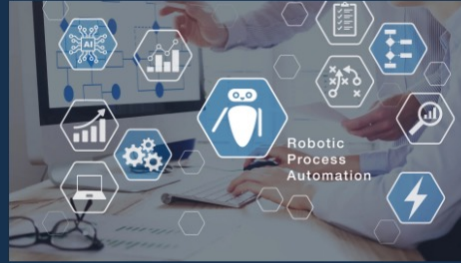

We support our clients with work teams able to carry out agile projects when building IT systems is required to respond to business needs. This modality is especially useful to obtain results and validate business models quickly.

## Our services

### Software Factory

When the client has a team of analysts, who structure the needs to be addressed, we offer the software factory service, which comprises a qualified team and development processes that guarantee the fulfillment of the needs and the continuous delivery of product.

### RPA

We identify the processes that need to be automated to add value to the business and optimize the staff's tasks. Robots can be built using automation platforms previously acquired by the client or independent software developments.

### Artificial Intelligence

Our computational models and advanced algorithms perform anthropometric identifications to capture, recognize, and analyze emotions, genders, age ranges, and other data useful for decision-making.

## Our services

### Chatbot and omnichannel communication

We create natural-language algorithms that favor interaction with people. Our bots can respond to simple or complex actions according to the specific customer needs.

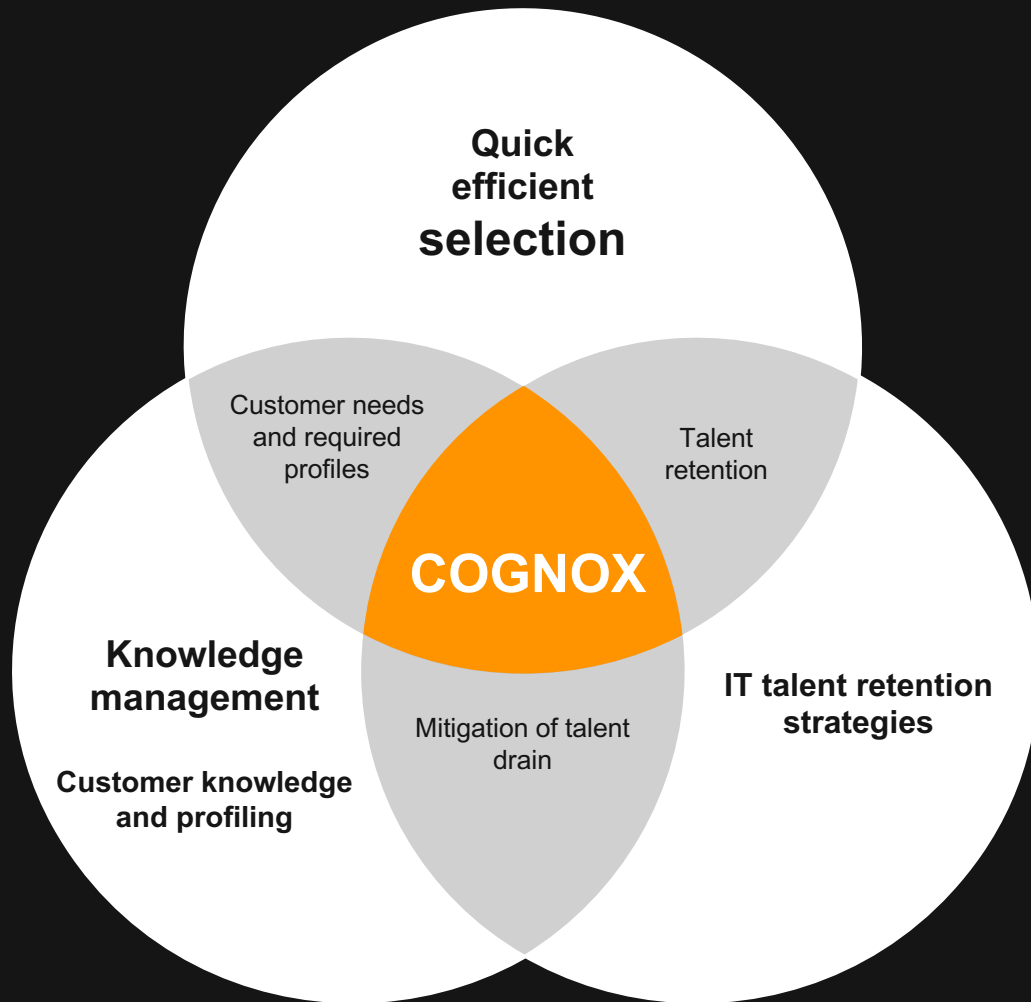

### Predictive manufacturing

What matters in big data is the use organizations make of them. Big data can be analyzed to obtain ideas for better decision-making and strategic business moves.

### Knowledge management

We are a company that strengthens and supports IT areas through selection, recruitment, and differentiated knowledge-focused management.
